

PROJECT

Telling Stories with Data

A part of the Data Foundations Program

PROJECT REVIEW

ANNOTATIONS 1

NOTES

SHARE YOUR ACCOMPLISHMENT!  

Meets Specifications

Fantastic job!

It was a pleasure to review your submission. The visualizations are very clear and it's very obvious that you fully understood the basics of Tableau. Also, your report is probably the most professional one I've seen so far for this project. This is definitely something you should include in your portfolio.

This is goodbye, it seems. It's been great to have you onboard. You show great aptitude for data analysis so it would be great to hear that you're planning to continue learning. In any case, we wish you the best in whatever is coming next for you.

Keep being awesome!

Visualization is Explanatory

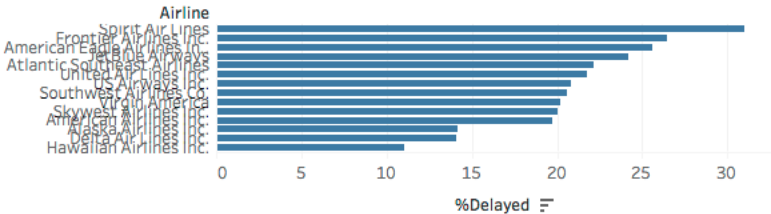

The visualization centers on a specific, clear finding in the data.

Great job here! All the visualizations focus on a very specific finding in the story. The only thing I would suggest to make things clearer, would be to add titles in every visualization to make things clearer.

The selected finding is clearly communicated. Design choices foster communication between the reader and the visualization.

Visualization does not add additional colors, shapes, or other design elements in an unnecessary way. Rather, each additional element should add to the insight being made.

The visualizations are overall very clear and the design choices were adequate. The only issue I could comment in this regard is the clarity of the plots in the second part of your story. The labels overlap and clutter so things aren't as clear as they could be. Please be careful with details like this in future visualizations.

Design

A reader's summary of the graphic would closely match the written summary in the writeup, or a reader would identify at least one main point or relationship that the graphic attempts to convey.

The summary is trying to steal the protagonism! You did a really professional and thorough job with it. The conclusions are exactly like what I would come up with if I had to describe my findings from your visualizations.

Overall, this was just fantastic. Keep being this professional in everything you do!

The visualization includes interaction or animation. The inclusion of filters and additional variables shown in tool tip as appropriate within the visualization interaction are present.

You went above and beyond in this requirement. There are a few filters that work correctly and add interaction to the visualizations. Awesome!

Color choices must accurately reflect the data and be chosen with accessibility in mind. For example, values that span from negative to positive numbers should be encoded with a diverging palette. Also, the color palettes should work for colorblindness.

You played it super safe here and that's completely fine! There are no issues whatsoever with the chosen colors!

Line plots for sequences, bar charts for categorical variables, etc.

The line and bar charts were used correctly. Well done!

Completeness

The three visualizations are included. This visualizations may be a single worksheet, but at least one must be a dashboard involving more than one worksheet. All visualizations must be clearly connected to a finding, and foster the interaction pieces (filters, colors, etc.) that allow for the finding to be found easily by a user.

You went above the requirements here. There's a great variety of visualizations and the dashboards work perfectly fine.

The visuals need to be saved to Tableau Public and the links to those visuals must be provided in the report along with the finding for each visual.

The insight(s) should be accurate and easily available from the filters and interactivity available in the visual.

As mentioned above, you did a fantastic job with your insights and the use of filters. This is without a doubt one of the most comprehensive submissions I've seen so far.

Each visual must be appropriate for the particular data type. However, you cannot submit three bar charts, or three line charts. You should have a minimum of at least three different types of visuals across all of your turned in items.
